

SRP REBATES FOR ENERGY-EFFICIENT NEW CONSTRUCTION PROJECTS

Effective FY21 (May 1, 2020–April 30, 2021)

If you are planning on building a new facility, take advantage of SRP Business Solutions. The program offers a variety of rebates for new construction projects that will lower your operating costs from day one. There are different programs depending on the stage of your project.

NEW CONSTRUCTION SOLUTIONS

“Whole-building” design is the basis for SRP’s New Construction Solutions program.

Are you still working on the design of a facility or major renovation? Take advantage of the SRP New Construction Solutions program, which offers the following opportunities through two distinct participation tracks to encourage the implementation of energy efficiency measures in new construction projects:

Enhanced Performance Track (energy design assistance)

- For multifamily buildings with 20,000 square feet or more of conditioned floor space and for all other commercial and industrial buildings with 75,000 square feet or more of conditioned floor space; in early design stage
- No-cost hourly building simulation modeling of potential energy efficiency measures
- No-cost lighting designer service
- Design team compensation up to \$12,000 to support the evaluation of energy efficiency measures
- Equipment rebates paid at \$0.10 per kilowatt-hour (kWh) of first-year electricity savings

Expedited Track

- For buildings with at least 20,000 square feet of conditioned floor space and/or with accelerated design schedules
- Equipment rebates paid at \$0.10 per kWh of first-year electricity savings

Customers must apply for either New Construction Solutions track during the design phase and before measures are purchased.

STANDARD BUSINESS SOLUTIONS

Prescriptive rebates are offered for a wide variety of energy efficiency measures, including:

- **Lighting** – If your lighting system exceeds the American Society of Heating, Refrigeration and Air-Conditioning Engineers (ASHRAE) 90.1-2013 lighting power density requirement by 10% or more and meets the equipment eligibility requirements for the program, SRP will pay you \$300 per kilowatt of reduced installed internal lighting demand.
- **HVAC** – Rebates are available for the installation of high-efficiency unitary air conditioners and heat pumps, chillers, packaged terminal units, vertical terminal units, variable-frequency drives on fans and pumps (not mandated by ASHRAE 90.1-2013), evaporative coolers and HVAC controls.

[Find out more on the next page](#)

CUSTOM BUSINESS SOLUTIONS

If you are installing an energy efficiency measure not available under the Standard Business Solutions program, SRP can still help. Custom rebates are available at \$0.08/kWh and \$300/average peak kW for the first year of electrical energy and demand savings, respectively, for all qualifying measures that exceed the minimum requirements mandated by ASHRAE 90.1-2013 and/or current industry standard practice, such as:

- Increased insulation levels in building envelope (walls, roofs)
- High-performance windows and fenestrations
- Networked lighting controls
- Energy recovery, free cooling and precooling
- Variable-frequency drives on process pumps/fans and material handling systems

Most measures require written approval from SRP before ordering, purchasing or installing in order to be eligible for rebates. Applications are available on savewithsrpbiz.com.

FOR MORE INFORMATION

Details regarding SRP Business Solutions offerings are available online at savewithsrpbiz.com.

SRP BUSINESS SOLUTIONS

SRP is committed to helping you save energy and money. We offer a rebate or incentive program for every size and type of business.

- Standard Business
- Custom Business
- Small Business
- New Construction
- Retrocommissioning
- Electrification
- Business EV
- Multifamily
- Demand Response
